KEY FEATURES

- Can be used as reflex testing as only extracted RNA is needed.
- Streamlined workflow for easy use with readily prepared master mix.
- Open platform compatibility.
- No cold chain shipping.

KEY BENEFITS

- An alternative to next generation sequencing and S gene target failure (SGTF), it enables scientists to analyse and monitor these specific genomic mutations.
- Pivotal in the role of screening for SARS-CoV-2 Variants for the purpose of genomic surveillance and studies.

Validated Use

Sample Types	PCR Platform
RNA extraction used for diagnosis	Must be able to read fluorescence through the FAM and HEX channels
